

**The key to eliminating rust, corrosion and damage is right at your fingertips. KATS Coatings® are specifically designed to lock out these threats, while protecting the environment.**

### 4000 Series

KATS 4000 Series coatings are designed utilizing plant based polymers to provide permanent protection for up to 12 months from rust and corrosion to ferrous and nonferrous materials. Coatings may be applied with water compatible HVLP or conventional spray systems.

### 5000 Series

KATS 5000 Series coatings provide temporary protection for up to 12 months and are designed to protect painted and chrome surfaces from potential damage from bugs, bird droppings, acid rain, smoke, iron dust, railroad iron filings and other contaminants. Coatings may be applied with water compatible HVLP or conventional spray systems.

### 6000 Series

KATS 6000 Series coatings provide permanent protection for up to 36 months. These products protect engine components, vehicle underbody metal sheeting, and all ferrous and nonferrous materials from rust, salt and corrosion. These coatings may be applied with water compatible HVLP, airless, or conventional spray systems.

### 7000 Series

KATS 7000 Series coatings provide permanent casting sealant once uniform top coat has been applied. These coatings may be applied to carbon fiber, ferrous and nonferrous materials to seal porosities. Once applied by liquid flow coating or dipping, the substrate does not need any pressurization to set the sealant in the porous material.

### 8000 Series

KATS 8000 Series removers are concentrated forms of water based removers that are designed to remove our 5000 Series of temporary coatings. These removers will not leave a residue on the surface once thoroughly rinsed with water. KATS 8077 Remover is biodegradable and environmentally safe.

### 9000 Series

KATS 9000 Series peelable coatings are designed using water based synthetic polymer that can be applied to smooth, non-porous surfaces and simply peeled off once dry. All KATS peelable coatings may be applied by water compatible airless sprayers or automatic spray systems to protect surfaces from minor nicks, scratches, abrasions, and any unwanted contaminants during transit or in completion of assembly during manufacturing.

### Kwik Kleen

Kwik Kleen is a concentrated form of water based cleaners to remove grease, oil, tar and road grime. Once product has been applied and allowed to soak, simply rinse with water. Kwik Kleen is used in the automotive, trucking, construction, agricultural, mining and manufacturing industries for cleaning and degreasing.

Product	Permanent Coating	Temporary Coating	Remover	Cleaner/ Degreaser	Biodegradable

KATS Coatings® is an ISO 9001:2000, TS 16949 and ISO 14001 certified manufacturer and worldwide distributor of water based, environmentally friendly, fast drying permanent and temporary coatings, cleaners and removers. Our complete line of water based protective coatings includes products for the automotive, trucking, industrial, mining, construction, railroad, agricultural, aerospace, RV and manufacturing assembly industries.

For over 20 years, KATS Coatings® has maintained its reputation for quality products and attention to customer satisfaction.
